

# ORAL TROCHE

Insert troche between the gum and the cheek or under the tongue and allow the troche to dissolve slowly. Do not chew or swallow whole.

## Tips For Success:

- Follow the directions on your prescription label.
- Take your medicine at regular intervals. Do not take your medicine more often than directed.
- Do not eat or drink within 30 minutes of taking this medication.

**Storage:** Keep in a cool, dry place, away from light. In the summer, it is best to keep troches in the refrigerator in an airtight container.
